Paragraph Tag:

The < p > Tag defines a paragraph in HTML.

The browser breaks a line without the need of the < br> tag.

Paragraphs are automatically separated by a line break.

It's similar to writing a paragraph in a word document, paragraphs need to be separated from each other for them to be coherent and understandable.

Here's an example :

```
<p>My first paragraph</p>
<p>My second paragraph</p>
```

My first paragraph

My second paragraph
