

🚩 Current Skill Creating Your First JavaScript

Creating Your First JavaScript

Learning programming often begins with executing a simple “Hello World!” program.

Let's print the “Hello World!” line in the console using JavaScript with this one line of code.

Go to this link (it's a code editor online.). In the JavaScript window, delete all the code and copy-paste the following code.

Go ahead, run it and see for yourself.

P.S: No need to worry, we are going to see what console.log is in another part.

```
console.log("Hello World");
```
