

⚡ Current Skill console.log

## Behold the Console Log!

What we've studied is all fine and dandy, but remember that mighty `console.log()`? Well that's going to be your best ally and companion during your upcoming journey in the valley of JavaScript.

You should use the `console.log()` method to print to console your JavaScript code. The JavaScript console log function is mainly used for code **debugging as** it makes the JavaScript print the output to the console.

To open the browser console **right-click** on the page, select **inspect**, click **console**, and voila! This is where the magic happens!
