

⚡ Current Skill CSS Display : none

Display: none

We can hide elements by declaring a display: none value. Another way is to declare visibility:

hidden instead of display: none, but there is a difference between them..

To show the difference, let's hide one of the boxes below:

- CSS

```
#box-2 {  
  
  display: none;  
  
  width: 100px;  
  
  height: 100px;  
  
  background: blue;  
  
}
```

- Output

Display: none removes an element from the view

- CSS

```
#box-2 {  
  
  width: 100px;  
  
  height: 100px;  
  
  background: blue;  
  
  visibility: hidden;  
  
}
```

- Output

Blue box is invisible now, but it's still there
