

⚡ Current Skill Div Tag.

Div Tag:

`<div>` is one of the most useful tags in HTML.

The `<div>`, a block-level element, is like a component or a bag. It can contain many HTML elements in order to apply changes to them as a whole section.

`<div>` helps in organizing your code as well as improving creativity with CSS. We will learn how it does that later in the course.

```
<div>

  <h1>This is the first division</h1>

</div>

<div>

  <h1>This is the second division</h1>

</div>
```

Our code output would be :

This is the first division

This is the second division

HTML What is a Div
