

 Current Skill Comments in JavaScript

Comments in JavaScript

Commenting allows us to write stuff that will be ignored by the interpreter and won't be run as code.

To achieve this we use:

- `//` to comment anything on the same line after the double slash.
- `/*` & `*/` to comment on multiple lines.

```
var a = 2 + 2 // I'm a single line comment
```

```
/*
```

```
And I'm a multi-Lines comment,
```

```
Anything in here will be ignored by the Javascript
```

```
Interpreter.
```

```
var b = 3 + 3
```

```
*/
```
