

🚩 Current Skill CSS Media Query : Breakpoints

Media Query Breakpoints

What is a breakpoint?

CSS breakpoints are points where the website content responds according to the device width, allowing you to show the best possible layout to the user.

These are the most used breakpoints:

```
/* Extra small devices */
```

```
@media (max-width: 576px) { /* ... */ }
```

```
/* Small devices (landscape phones, 576px and up) */
```

```
@media (min-width: 576px) and (max-width: 768px) { /* ... */ }
```

```
/* Medium devices (tablets, 768px and up) */
```

```
@media (min-width: 768px) and (max-width: 992px) { /* ... */ }
```

```
/* Large devices (desktops, 992px and up) */
```

```
@media (min-width: 992px) and (max-width: 1200px) { /* ... */ }
```

```
/* Extra large devices (large desktops, 1200px and up) */
```

```
@media (min-width: 1200px) { /* ... */ }
```
