Function Parameters

Parameters are variables listed as a part of the function definition.

Arguments are values passed to the function when it is invoked.

In JavaScript, parameters of functions default to undefined. **Default function parameters** allow named parameters to be initialized with default values if no value or undefined is passed.

```
var add = function( a, b ) {

    return a + b;

}

console.log(add(0,1)) // prints 1
console.log(add()) // prints NaN

var add = function( a = 0, b = 1 ) {

    return a + b;

}

console.log(add())

/* prints 1 even though no arguments were given to this function call */
```
